## Original Manufacture Certificate for Mechanalysis model MIL8800 Machinery Protection Monitor

The Mechanalysis model MIL8800 series of Machinery Protection Monitors, suitable for vibration monitoring systems and turbine supervisory instrumentation, is 100% designed and manufactured by Mechanalysis (India) Ltd of the above Registered Office.

The model MIL8800 evolved from the highly successful Mechanalysis model MIL8700 with over 300 systems in regular use in India and abroad over the last decade. The microprocessor based programmable model MIL8800 was launched for Customer use in April 2008 and the first systems were successfully commissioned in July08. Since then deliveries have been made on a continuous basis.

The model MIL8800 was designed to the American Petroleum Institute (API670) specification which is the Global Standard for on-line machinery vibration monitoring systems. The MIL8800 has undergone extensive field trials and type tests. It is certified with the European Union CE Mark.

We confirm that Mechanalysis (India) Ltd is the sole proprietor of the model MIL8800 system.
