

PRESS RELEASE – APRIL 2008

Mechanalysis India Ltd Announces Development of API670 Machinery Protection Monitor

The world of Vibration Monitoring and Turbines Supervisory Engineering now has a new entrant. Mechanalysis (India) Ltd (MIL) announced their API670 Edn4 compliant system at the International Power Generation Conference at New Delhi in April 2008. Over the past 15 years there has been no new system for monitoring strategic rotating machinery. MIL, an independent Indian developer with over 30 years experience following its former joint venture with the now defunct IRD Mechanalysis of UK and USA, was able to take forward their experience to develop a microprocessor based programmable dual channel 19” Rack protection monitoring system. It has already delivered two systems after extensive field trials and more orders are underway. Peter W. Hills MD & CEO said that this development endorses India’s growing position in the World of industrial electronics and software.
